

### Sensory Wobble Motion Stool

**ABOUT THE EQUIPMENT :** Wobble Stool looks like an ordinary stool but has a slightly convex base to allow 360 degree movement. The base is weighted to give stability and has is covered with a non slip rubber bottom. the movement in the stool makes slouching and poor posture an almost impossibility! Similar to a therapy ball the stool engages core muscles to encourage "active" sitting which in turn improves focus and concentration. Ideal for those who fidget, have hyperactivity, impaired body position awareness and low muscle tone.
